FOR IMMEDIATE RELEASE

Adapting C-UAS development at the pace of the threat

Piotr Żelazek, Executive Vice President of Xcerus Inc., will speak about the accelerating evolution of drone tactics on the modern battlefield at the Counter UAS Technology USA conference in Washington DC on Wednesday, December 2, from 10:30 to 11:00 a.m.

November 17, 2026 – Xcerus Inc., a US Counter-Unmanned Aircraft Systems (C-UAS) company, announced that Piotr Żelazek, Executive Vice President of Xcerus Inc., will speak about the accelerating evolution of drone tactics and their experience in building effective counter-drone systems, shaped by lessons from the frontline in Ukraine and the region's active border.

"Our mission, Innovation at the speed of the frontline™ was born out of the escalating scale and changing character of the drone threats our customers face every day, said Żelazek. The war in Ukraine is now a war of drone mass. in May 2026, Russia launched 8,161 Shahed-type drones, more than three times as many as in January 2025. Swarms are the next stage."

Żelazek will speak about the trend toward drone operations in coordinated groups, with relays, leaders and assigned roles as well as the ways to address this gap in today's air defenses with a C-UAS command and control system that treats a formation as a single object.

Xcerus's mission is to turn the lessons of the drone frontline into superior American counter-drone capability, protecting US forces, communities and critical infrastructure at the speed the threat evolves. The company is building US engineering, software development, integration and testing capabilities, is hiring, and is designing its open architecture to integrate US-made sensors and countermeasures. Xcerus will be the exclusive US licensee of the HAWK C-UAS system and HAWK C2 software.

Xcerus will introduce itself to the US defense community at Counter UAS Technology USA: Defense & Security: North America, November 30 – December 2, 2026, in Washington, DC.

About Xcerus Inc.

Xcerus Inc. is a US company delivering Counter-Unmanned Aircraft Systems (C-UAS) capability to military, homeland security, law enforcement and critical infrastructure customers. As the American operating arm of the technology group founded by Zygmunt Rafał Trzaskowski, which includes Hertz Systems and Hertz New Technologies, Xcerus combines 30 years of experience in building public security systems with lessons from the frontline in Ukraine. Its mission is to deliver counter-drone innovation at the speed of the frontline. www.xcerus.com
